

INTEGRITY IN SCIENTIFIC RESEARCH: WHERE ARE WE NOW ?

WORKSHOPS

Aims of the workshops:

To identify actions that can be taken at the level of the Lyon Universities and research communities, the CRNL and at the level of research teams and individuals.

The situations differ, depending on who was involved in the questionable research practice (QRP) (student, staff) and who noticed it (student, staff).

Before the questionable research practice occurs:

State of the art :

- what leads to questionable research practices?
- What is already being done to prevent questionable research practices?

During (questionable) research practice:

How can researchers / students best be supported to help them avoid making mistakes that would be classed as questionable research practice or even fraud?

If questionable research practices happened:

How can questionable research practices be found out (with hindsight), and what should be done when a practice was questionable or there is a suspicion that it might be?
